SAMPLE COLLECTION

Sample Collection and Preparation Procedure: Collect blood in a plasma EDTA tube (Purple Vacutainer) or in a serum collection tube (Gold (SST) or Red Vacutainer) - please do not use heparinized tubes for sample collection. Within 30 minutes from collection, centrifuge at 1000 x g for 10 minutes at 4°C. Immediately transfer/aliquot 0.3 - 1 mL cell-free plasma or serum to a small tube (~3mL or smaller tube such as a false-bottom tube). Freeze the sample ($\leq -20^{\circ}\text{C}$) and ship on dry ice (consider including a temperature monitoring device in the shipment).

Sample Stability: 30 min MAX at room temperature during processing. Stable for 1 year if stored frozen (-80°C preferred). Not acceptable or stable if stored or shipped* at 4°C.

*Samples processed in BD P-100 tubes may be shipped unfrozen with an ice pack.

Please ship on **Monday** or **Tuesday** of any desired workweek to ensure your samples are scheduled to arrive **before 3pm on Friday**. Please do not send samples on weekends or holidays as Eve Diagnostics will be closed and **samples will not be received until the following workweek**. Shipments from any shipping company are accepted (including Purolator and FedEx). Tracking numbers should be retained for delivery confirmation. If problems arise or your package is not delivered promptly please email us at contact@evetechnologies.com.

Shipping -- [See Sample Shipping Guide](#). Please send properly labeled and packaged samples with this requisition to:
